

Punta

Punta is a contemporary high contrast serif family characterized by extremely *sharp & pointy* details.

The type family ranges from Light to **Black** with corresponding *italics*.

A unique texture, large lowercase proportions, and compact spacing make this inviting typeface perform well in titles, headlines, or shorter paragraphs of text in bigger sizes.

Invented in 1938 by a man named Herb Bishop in Phoenix, AZ, *Squirt* is a grapefruit-flavored soda that's a favorite in the hotter regions of the country. It's a perfectly refreshing beverage for hot summer days, and in the 1960s, was marketed as a cocktail mixer for "grown up tastes." "Squirt's a fine, dry cooler that fixes your thirst, with never an after-thirst," a 1962 advertisement for the *soda proclaims*. "It's a quality mixer that sparkles your drinks and never dulls drink flavors." Also during the '60s, the brand advertised recipes for cocktails like the *Squadka* (Squirt and vodka) and the *Squiskey*, which is, you guessed it, a combination of *Squirt* and *bourbon* or *rye whiskey*. Invest \$5 in a vacuum pump. "I have one of them at home. I don't always drink an entire bottle of wine, so it's nice to be able to preserve it by taking the oxygen out of it. *That's honestly a factor: how much oxygen a wine sees.*" A few options: Find out if your wine is made to last (or specifically get wines that are). "Some wines do better [the next day], but there's no guarantee something's going to be amazing the next day. Get to know wines and ask your wine professional what they think; a lot of shops are still open and doing delivery and pickup and have different ways you can engage with them."

A pencil is a writing or drawing implement with a solid pigment core encased in a sleeve, barrel, or shaft that prevents breaking the core or marking a user's hand. Pencils create marks by physical abrasion, leaving a trail of solid *core material that adheres to a sheet of paper or other surface. They are distinct from pens, which dispense liquid or gel ink onto the marked surface. Most pencil cores are made of graphite powder mixed with a clay binder.*
